

Why does the world need BIOPRO Econo Fuel Chips?

While most of us are concerned about the health and environmental impact of our driving-habits, just as many of us are concerned about what driving does to our pocketbooks. Over the last few years gas-guzzling SUVs have become the common sight on our roads. At the same time oil-prices have skyrocketed, making driving a very expensive necessity.

Finally, there's help! After significant time and financial resource investment, BIOPRO's revolutionary Econo Fuel Chips were created to address both the ecological and economical issues - and then some.

Smog in Los Angeles and Mexico City fills the sky, exhaust-fumes seep into our cars while we sit idly in traffic.

Air pollution around the world has reached such dangerous levels that on hot days some cities advise people to stay inside their homes. How does this toxic pollution affect our health? The symptoms of being exposed to high concentrations of air-pollution can range from respiratory issues to nausea, headaches and dizziness. In addition, air pollution threatens the health of every organism around us.

**Reduce Emissions &
Increase Fuel Mileage**

Econo Fuel Chip

-INCREASE GAS MILEAGE-

BIOPRO Econo Fuel Chip

HOW It Works

While most of us are concerned about the environmental impact of our driving habits, just as many of us are concerned about what driving does to our pocketbooks. Over the last few years gas guzzling SUVs have become common on our roads. At the same time, oil prices have skyrocketed, making driving a very expensive necessity.

The Econo Fuel Chip is programmed to:

- **Increase engine power** (particularly noticeable in low RPM range)
- **Reduce emissions/engine runs smoother**
- **Increase fuel mileage**

How to apply the Econo Fuel Chips to vehicle's gas-tank?

In order to achieve increased mileage and reduced emissions, **two** Econo Fuel Chips are needed per vehicle. Installing the Econo Fuel Chips is simple and easy to do – it literally takes seconds!

1. Before applying the Chips, thoroughly clean a small area on the bottom of your gas-tank of grease and dust. If necessary, use a wire-brush to clean the area properly.
2. Peel of the paper on the back of each Chip, place them approximately 5-10 inches apart from each other and firmly press the adhesive side of each of the Econo-Fuel Chips onto the cleaned area.
3. While the Chips' adhesive is strong, we recommend using *super glue* to securely attach the Chips to the gas-tank. While not necessary in most cases, you may want to consider hiring a mechanic to help you attach the Chips on your tank if you do not feel comfortable doing it yourself.

SCIENTIFIC TESTS CONFIRM:
Econo-Fuel Chips Significantly Reduce Emissions and Increase Gas Mileage by Nearly 15%!

Tests conducted in Italy, Austria, Germany and the U.S. clearly confirmed that Econo Fuel Chips not only increase engine-power output, but it also reduce key-emissions and increase mileage by as much as 15%. What does that mean for you? Not only are you helping to lessen the pollution-load on mother earth, but you and your family will also be able to save hundreds of dollars a year at the gas-pump!

Using BIOPRO's Energetic Elevation Chamber (EEC), BIOPRO Econo Fuel Chips are charged with a proprietary blend of resonant frequencies. The proprietary brand of resonant frequencies influence the fuel molecules in the fuel tank - just like opening them up and allowing them to hold more oxygen. This results in a cleaner burning fuel in the combustion chamber of the engine resulting in increased power and less pollution. Even more importantly, less combustion-particles leaving the exhaust leads to a significant reduction in emissions, including visibly less smoke in Diesel engines. Furthermore, in particular in the lower RPM range, more engine power will be noticeable. The engine operates more calmly and has a smoother, more homogenous torque-band. **As a result, the engine is preserved better which leads to noticeably reduced emissions and increased mileage!**

Tests conducted in Italy, Austria, Germany and the u.s. clearly confirm that Econo Fuel Chips not only increase engine power, but may also reduce key emissions and increase mileage by as much as 15%.

The "Eco" in Econo Fuel truly does stand for both Ecology and Economy, so order yours today!

IMPRESSIONS SAVINGS					
Vehicle Type	Make/Model	Test Country	Increased Mileage	Savings/Year (15K mi/yr, \$2.20/gallon)	
Bus	Iveco	ITA	7%	\$231.00	
Truck	GMC Yukon XL	CAN	10%	\$254.00
